Importance: High

Dave,
I haven't yet drafted my response to Mace,
I spent hours on chap. 7. ... and need to take my daughter out sledding.

Hi Tom,

I need to know what is going on with the non-apis chapter.

If it is significantly changed, I have two options I need to consider/propose to you. (1) I need to consider pulling my name and letting the other authors know that the chapter is significantly altered so that they can decide what they would like to do; or (2) you and Dave need to return the non-apis chapter to the approved content from April 2012. Obviously, I would prefer option 2.

I do not think that redundancy in the overall book is a problem because it is a multi-authored book and each chapter has a specific list of authors. And I do not mind that content from the non-apis chapter was inserted into other chapters of the book (e.g. into the exposure chapter). This seems very appropriate, in fact, to help the exposure chapter be more complete on its own.

However, the non-apis chapter coauthors want that content all in one place so that the non-apis chapter can be cited on its own and serve as a complete reference for considering non-apis bees in risk assessment. This is why, for example, it is important to also have the exposure information in the non-apis chapter. Also, specific content on nesting and other ecological background on non-apis bees was removed altogether and should be reinserted.

Give me a call or shoot me an email to let me know where this stands.

Thanks
Mace
